After seeing this graph, I was amazed by the logic behind this.

The hike in petrol price per litre during the years 2004-2009 is ₹6.91 and during the years 2014-2019 it is ₹9.32, but the percentages given is 20.5% during 2004-2009 and 13% during 2014-2019.

The percentage cannot be compared when the values itself are giving us clear picture about the hike in prices. Therefore, the given graph is clearly a misleading visual.

Also, we later got an another graph where the prices of crude oil was also included. The prices of crude oil jumped from \$58 to \$107 between 2009 and 2014, but the prices of the same dropped to \$71 between 2014 and 2018, but the price of petrol per litre in India remained ₹80.73, which is a clear loss of logic and a misleading information.
